

## EMC-Protection Cover for **SiViB** Record 1500

- Solution for enhanced EMC protection
- can be retrofitted
- RS232 / USB port still usable
- Ethernet connector (option) accessible
- LEDs stay visible

In EMC problematic environment, such as near variable-frequency drives, sometimes an additional shielding of the SiViB monitors could be desirable. The SiViB Record EMC-protection cover is the solution for this. After completing the wiring connections, the protective housing is being sled over the monitor. Together with the mounting base plate it forms a closed shield for the electronics.

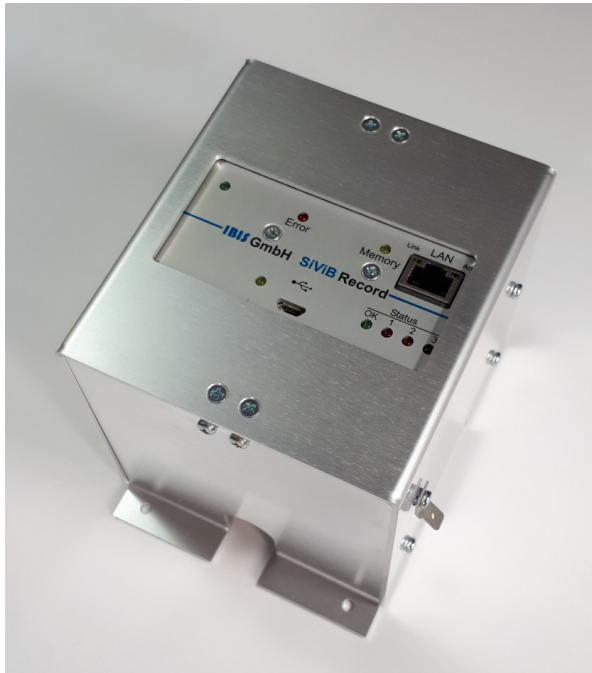

### **Remark:**

The SiViB Record EMC-protection cover is only one component of an EMC concept. Please pay also attention to the rules for cabling the sensors and grounding cable shields and the instrument..

The cover can be used for SiViB Record 15xx and for SiViB Record 15xxSTM.  
This new version replaces the old type, which is no longer available.

## EMC-Protection Cover for **SiViB** Record

Example of use:

### Specifications:

- Dimensions: approx. 120 x 140 x 115 mm (W x D x H)
- Case:: Aluminum-Case IP20 for control cabinet; mountable on DIN rails or directly on baseplate.
- Grounding: Via mounting screws on baseplate or 6.3 mm flat connector
